Lea Community Primary School

Progression of Knowledge- Computing

Academic vear 2023-2024

Progression of Knowledge at Lea Community Primary School - Computing

Substantive Knowledge

	EYFS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
Vocabulary	Icon, button, login, log out, menu	As EYFS and; Search, tool bar, notification, device, data, pictogram, algorithm, code, debugging, sequence, program, execute, software, hardware	As Year One and; Action, bug, command, input, output, internet, e-mail, table, network, search engine, sound effect, e-book, filter	As Year Two and; Properties, nest, permission, verify, carbon copy, blind carbon copy, inbox, draft, binary tree, vlog	As Year Three and; Code blocks, if statement, if/else statement, prompt, variable, cookies, malware, phishing, components, CPU, motherboard, RAM	As Year Four and; Abstraction, string, concatenation, decomposition, copywrite, encrypt, formula, format cell, Computer Aided Design (CAD),	As Year Five and; Simulation, x and y properties, QR code, sprite, ethernet, IP Address, binary, nibble, byte, kilobyte, megabyte, gigabyte, terabyte
<u>Coding</u>	Learn how to follow instructions during practical activities and games. Develop an understanding of giving simple instructions. Follow simple instructions.	To understand what instructions are and can predict what might happen when they are followed.	To understand what an algorithm is and can explain that it is a set of instructions and that algorithms follow a sequence. To understand how to create a computer program using an algorithm.	To understand what a flowchart is and how flowcharts are used in computer programming. To understand how to use a flowchart to create a computer program. To understand how to create a range of programs using coding knowledge.	To begin to understand what selection is in computer programming. To understand how to interpret an IF statement and therefore know how to create a program that includes an IF statement.	To begin to understand how to simplify code in order to make own programming more efficient. To understand what decomposition and abstraction are in computer science. To understand how to use decomposition to	To understand how to implement a game which includes timers and a score. To understand what the launch command is. To understand how to use multiple functions in own program.

	Learn how to			To understand how	To understand how	make a plan of a	To understand how
	debug when things go wrong.			to run, test and debug their own	an IF/ELSE statement works.	real-life situation.	to arrange code in multiple tabs.
	90			programs.	Statement works.	To understand what	murriple rubs.
	Understand an			, ,	To understand what	a function is in	To develop
	algorithm is a set				a variable is in	coding and know how	creativity when

	and can make logical		effects in their	other coding structures	of how to accomplish	* Children translate
	attempts to fix the	* Children can identify	programs. Children are	including variables to	the set task in code	algorithms that include
	code, e.g. Bubbles	the parts of a program	beginning to understand	achieve the effects	utilising such	sequence, selection and
	activity in 2Code.	that respond to specific	the difference in the	that they design in their	structures. They are	repetition into code and
		events and initiate	effect of using a timer	programs. As well as	combining sequence,	their own designs show

specific actions. For example, they can write a cause and effect sentence of what will happen in a program. command rather than a repeat command when creating repetition effects.

- * Children's designs for their programs show that they are thinking of the structure of a program in logical, achievable steps and absorbing some new knowledge of coding structures. For example, repetition and use of timers. They make good attempts to 'step through' more complex code in order to identify errors in algorithms and can correct this. e.g. In programs such as Logo, they can 'read' programs with several steps and predict the outcome accurately.
- * Children can list a range of ways that the Internet can be used to provide different methods of communication. They can use some of these methods of communication, e.g. being able to open, respond to and attach files to emails using 2Email. They can

understanding how variables can be used to store information while a program is executing, they are able to use and manipulate the value of variables. Children can make use of user inputs and outputs such as 'print to screen'. e.g.

2Code.

* Children's designs for their programs show that they are thinking of the structure of a program in logical, achievable steps and absorbing some new knowledge of coding structures. For example, 'IF' statements, repetition and variables. They can trace code and use step-through

methods to identify

errors in code and make

logical attempts to

correct this. In

programs such as Logo,

they can 'read' programs

with several steps and

predict the outcome

accurately.

* Children recognise the main component parts of hardware which allow computers to join and form a network. Their selection and repetition with other coding structures to achieve their algorithm design.

- * When children code, they are beginning to think about their code structure in terms of the ability to debug and interpret the code later, e.g. the use of tabs to organise code and the naming of variables.
- * Children understand the value of computer networks but are also aware of the main dangers. They recognise what personal information is and can explain how this can be kept safe. Children can select the most appropriate form of online communications contingent on audience and digital content, e.g. 2Blog, 2Email, Display Boards.

that they are thinking of how to accomplish the set task in code utilising such structures, including nestina structures within each other. Coding displays an improving understanding of variables in coding. outputs such as sound and movement, inputs from the user of the program such as button clicks and the value of functions.

- * Children are able to interpret a program in parts and can make logical attempts to put the separate parts of a complex algorithm together to explain the program as a whole.
- * Children understand and can explain in some depth the difference between the internet and the World Wide Web. Children know what a WAN and LAN are and can describe how they access the Internet in school.
